

**1000+**  
buildings  
optimised

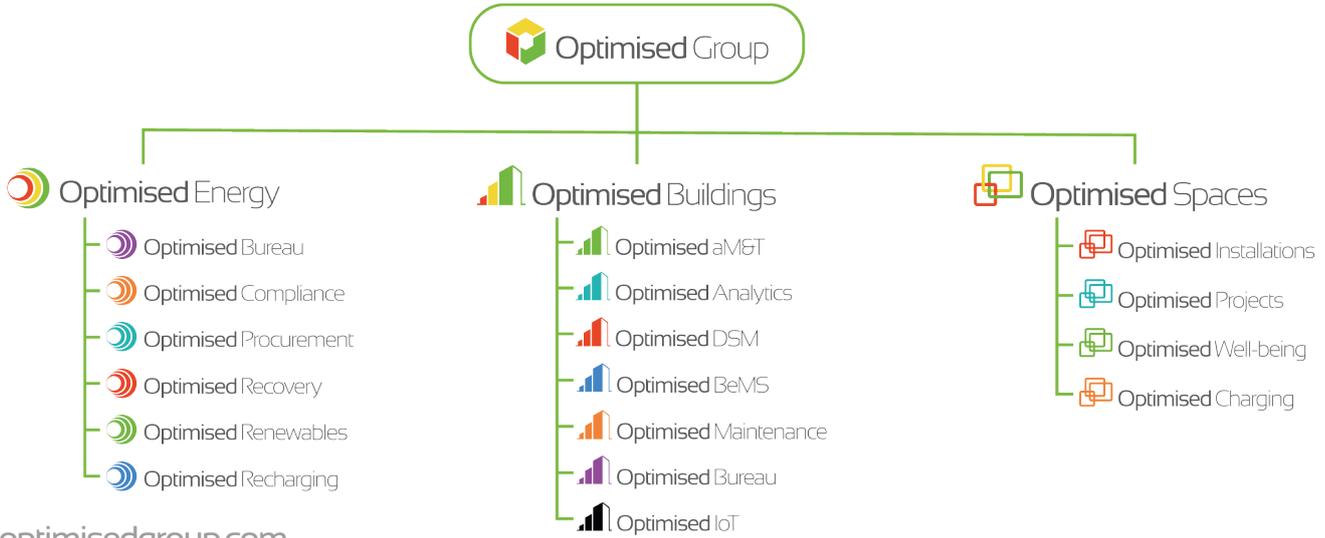

**£8m+**  
energy savings  
annually

The Optimised Group of companies deliver quantifiable business outcomes to our clients through a comprehensive suite of energy / property services and technologies while driving a net-zero carbon agenda.

**Optimised Energy** - takes a forensic approach to your energy needs providing insights into the savings hidden within your energy. Our unique approach to optimising the way you buy, manage and validate your energy, will help you find them. We reduce our clients' energy consumption and costs through energy efficiency projects, utility bill validation, cost recovery exercises. This is achieved by taking a strategic approach to all engagements, and the seamless delivery of integrated energy services. In a world where energy costs are set to rise consistently, and the pressure to pursue low carbon development strategies, Optimised Energy is perfectly placed to advise on and implement measures to deliver a sustainable future for your business.

**Optimised Buildings** - deliver solutions and services to drive improved performance from our clients' buildings and assets while driving quantifiable business benefits. We connect technology, expertise and processes to optimise building performance, enhance work environments and continuously monitor to ensure business outcomes are achieved. Our services deliver energy efficiencies, occupant comfort, extended asset life and reduced maintenance costs. Our team has a wealth of industry sector experience and are well versed in building services, controls and automation, energy analytics and IT. This combination allows us to maximise the value we provide to our clients and provides a holistic view to managing energy. As we have real experience in designing, implement and operating buildings and building systems – we know first hand how to drive operational savings.

**Optimised Spaces** - provide services and solutions support improved performance in our clients' operations and facilities. Connecting, spaces, people, processes and assets to optimise building performance, enhance work environments to ensure optimal operational results.

Our solutions and services deliver improved occupant comfort and well-being, extended asset life, resource efficiencies and reduced maintenance costs. We become an extension of our clients property team that take care of the change needs of the business while also delivering on day-to-day business requirements.

**Our Clients** - we work closely with end user clients typically becoming an outsourced extension of their own energy team delivering a range of services specific to their needs. As a one stop shop we focus on clients needs whilst also procuring our services through FM's, managing agents and strategic partnerships.

**Innovation** - we use best of breed technologies in the market integrating these with processes where business benefits can be derived. Our partnerships with some of the best tech providers in the industry enable us to deliver innovation to clients with quantifiable business value .

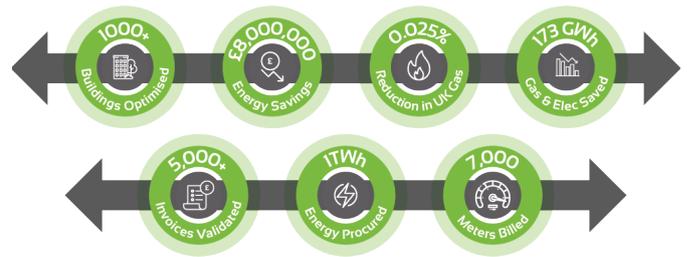

Our 24/7 bureau service ensures that portfolios of buildings are being continually managed and optimised.

**Vision** - we operate in a market that is functional, while at the same time limited by the capabilities that individual systems and solutions provide. We are taking a much more holistic approach to address energy challenges, needs and the drive towards net-zero buildings. This holistic approach enables us to take advantage of existing technologies that our clients have already invested in, while complementing them with new innovations, solutions and services. It is the integration of these solutions and services (old and new) that then bring real value to our clients.

We firmly believe that our combination of technology, domain expertise and process combined can now deliver business outcomes that our clients are striving for.

As a group we already have mature service propositions, but we are not stopping there. We are pushing the boundaries of what is possible, underpinned by the core offerings of the Optimised Group. Linking in IoT (Internet of Things), EVC (Electric Vehicle Charging), Battery / Hydrogen Cell Storage, real-time trading, enterprise level monitoring, control and optimisation, demand side management, analytics, AI (Artificial Intelligence) , renewables and export to the grid.

**Annual Achievements**

The power of linking these technologies, applications and services can deliver huge benefits to our clients if managed in the right way. Our vision is to become the one-stop provider that deliver this for our clients across portfolios of buildings!
